

FLIPPED LEARNING

Flipped learning is a pedagogical approach in which direct instruction moves from the group learning space to the individual learning space.

BENEFITS

- Frees up class time to practice difficult concepts
- Promotes learning communities
- Increases student autonomy

CHALLENGES

- Students may not do the pre-class work to acquire the basic concepts
- It's still "homework" to the students
- Won't suit all learning styles

START

7 STEPS TO FLIP YOUR CLASS

1. PLAN

Choose one lesson you want to flip and outline the key learning outcomes and a lesson plan.

2. DEVELOP

Develop the flipped content.
What will you ask the students to view or do at home prior to class?

3. RECORD / CREATE

Make a video or create an online lesson.
Be sure it contains all the key elements you will feature in the class activity.

4. SHARE

Share the flipped homework assignment with students.
Explain why and how it will impact the class.

5. DELIVER

Deliver the follow up in class activity.
What will you do in class to extend the material covered in the homework?

6. REVIEW

Asses areas of success and what needs improvement.

7. REVISE AND REPEAT

Revise your material and refine it for the next delivery.
